List of Journals and other Serial Sources

Introduction

Input to the INSPEC database is prepared from the world's literature in the fields of physics, electrical engineering, electronics, computers and control. The publications scanned include journals, conference proceedings, books, reports and theses. The INSPEC *List of Journals and other Serial Sources* provides details of all regular journals and other serial publications, e.g. series of monographs, annual reviews, report series etc., which are regularly scanned for the database.

Selection

Not all articles from the listed publications are abstracted. Selection depends on whether the individual article is of sufficient quality and falls within the INSPEC subject scope. However, a number of journals are central to the INSPEC subject field and of a quality such that, virtually without exception, all articles are abstracted. These journals are indicated by *Abstracted Completely* in the entries.

Availability of Listed Publications

INSPEC does not itself supply copies of the original articles. However, the main entry for each serial generally contains sufficient information about the publisher for an order to be made. Otherwise, to obtain copies of articles abstracted in the INSPEC information services consult your organisation's library, or your other local and national lending libraries. Should you still have difficulty in obtaining the material please consult the:

Key to Examples

1. ***Full title***

2. ***Coden*** — this is a five-character unique code intended to identify the title for computer handling of serial titles. A sixth-character check digit has been added. The source for Coden is:

   International Coden Service
   c/o Chemical Abstracts Service
   The Ohio State University
   Columbus Ohio 43210
   USA

3. ***ISSN*** — the ISSN (International Standard Serial Number) also provides a unique identification for serial titles. ISSN are assigned by International Serials Data System (ISDS) national centres which are coordinated by the ISDS International Centre in Paris. The format of ISSN complies with ISO 3297-1975E *Documentation — International Standard Serial Numbering (ISSN).*

4. ***Abbreviated title and country of publication.***
   The form of abbreviation used in the title conforms to ISO 4-1972(E) International code for the abbreviation of titles of periodicals and ISO 833-1974(E) International list of periodical title word abbreviations.

5. ***Publisher's name and address.***

6. ***First and last issues covered by INSPEC.***
   For current journals, details are given of the first issue covered. Records are only available for journals added since 1968. For journals covered since 1968 or earlier the entry will therefore be (1968 —). For changed or discontinued titles, details of the last issue covered are also given. This information is not available for non-journal serials.

7. ***Frequency of publication.***

8. ***BLLD shelfmark.***
   For most of the current titles the British Library Lending Division's shelfmark is listed. Although not necessary, it is often helpful to quote this number when requesting titles from BLLD.

9. ***Non-journal serials.***
   This note indicates a non-journal serial which is regularly scanned for the INSPEC database. These include book series, numbered report series, conference series etc. It should be noted that although these publications are regularly scanned for the INSPEC database they are treated individually as separate books, reports, conferences etc. rather than under the serial title. It is not, therefore, possible to search for these serials using data elements such as CODEN, ISSN etc.

10. ***Title cross reference.***
The cross reference entries are provided to assist the user in locating titles within the list. Cross-reference entries have generally been used where:

   i) there is a foreign language form of the title

   ii) there is an alternative form of the title

   iii) the title begins with a generic term such as 'Bulletin', 'Journal', 'Report' etc. rather than the name of the organisation issuing the serial. In this case a cross reference is made from the name of the organisation.

   iv) the title begins with an acronym or initialism. In this case a cross reference is provided from the expansion of the acronym to the acronym itself. Some very commonly used acronyms or initialisms, e.g. IEEE are not expanded.

List of Journals and other Serial Sources

The 3884 titles displayed in bold type are publications which are regularly received and scanned by INSPEC for its information services. Entries are also provided for publications which have ceased to be published or which, for any other reason, are no longer scanned for the INSPEC Database. Any changes in title are indicated. Where a journal has had more than one change of title, an entry is included for each title.

The entries are arranged in alphabetic order of full title on the nothing-before-something principle.

The use of l’, n’ and t’ in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

‘Shch’ and ‘sht’ invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet ‘The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes’ published by the Royal Society, Burlington House, London W1 (February 1953, price 5p.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

CUMULATIVE INDEXES

Cumulative indexes are available for *Physics Abstracts*, *Electrical & Electronics Abstracts* and *Computer & Control Abstracts*, for both authors and subjects. These cumulations generally cover a period of four years, with the exception of *Computer & Control Abstracts* where the initial volume covered the period 1966–68. The table below shows the prices and periods for the two types of cumulative index.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database. Information is dispatched weekly on 150 mm × 100 mm (6″ × 4″) cards.

TOPICS

This is an SDI service based on standard profiles. There are over 90 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

JAPAN UPDATE

Six high-technology subjects are covered by Japan Update Services. Abstracts are provided for articles selected from about 300 Japanese journals and despatched weekly on conveniently-sized cards. This inexpensive service is designed to help engineers stay abreast of technological developments reported in the Japanese literature.

This new publication brings together, from a wide range of sources, the essential data on the structure, electronic states and properties (electrical and optical) of amorphous silicon. Leading experts have co-operated in the evaluation of the data. Prominent among these is Dr Marc H Brodsky of IBM, Yorktown Heights who has also written the introduction.

The handbook is an invaluable aid for all those engaged in research on amorphous silicon or developing new devices based on this important material.

Properties of Amorphous Silicon, casebound, 262pp, 280 x 210mm, is priced at £85 UK $195 USA and £110 elsewhere. To order your copy, contact:-
